

The Job “Happy Path”

Client setup → final invoice & payroll — the least-manual-input flow

The whole idea: front-load the setup. If the rate card, shifts, positions/specialties, job requirements, and crew assignments are built correctly up front, then nearly everything downstream becomes a **one-button “generate from” action** followed by a quick **review & approve**. Crew leaders and admins stop typing in numbers — the crew enters their own actuals in the staff app.

1	Create the client One-time setup. Reused on every future job.	SETUP
2	Create / assign the rate card The most important setup step. Define shifts, positions & specialties, and their bill rates carefully here — everything downstream inherits from this. Time spent here removes manual entry later.	SETUP
3	Create the job Attach the client and the rate card.	SETUP
4	Add job requirements Lay out the positions / specialties and shifts you need. Pulls straight from the rate card — pick, don't retype.	SETUP
5	Generate the quote Built from the requirements — no manual line-item entry.	1-BUTTON
6	Repeat 4 & 5 until accurate Adjust requirements, regenerate the quote. Iterate until the customer signs off.	
7	Issue the deposit invoice Generated from the agreed quote when a deposit is required.	1-BUTTON
8	Add crew assignments — spreadsheet import Import the roster spreadsheet to populate all assignments at once instead of adding crew one by one.	1-BUTTON
9	Generate timekeeping from crew assignments Timekeeping records are created directly from the assignments — no manual roster re-entry.	1-BUTTON
10	Crew enter their own time (staff app) Crew members log actual hours in the staff app. This offloads the data entry from the crew leader entirely — they review, not type.	CREW APP
11	Generate the final invoice from timekeeping Approved actual hours flow into the invoice automatically.	1-BUTTON
12	Repeat 11 until final Reconcile / regenerate as actuals are approved, until the invoice is final.	
13	Create the payroll run Generated from the same approved timekeeping actuals.	1-BUTTON
14	Record payments — deposit & final Apply payments received against the deposit invoice and the final invoice as they come in.	REVIEW

Where the effort actually goes

SETUP

Do it once, do it right. Steps 1–4. The only place real thinking is required — shifts and positions/specialties set here drive every quote, invoice and payroll downstream.

1-BUTTON

Generate-from actions. Quote, deposit invoice, crew import, timekeeping, final invoice, payroll run — each is produced from the prior step, not typed.

CREW APP

Offloaded to the crew. Actual hours come from the crew in the staff app, so the crew leader reviews instead of entering timekeeping.

REVIEW

Review & record. Approve generated records and log payments as they arrive.

Bottom line: set up the job requirements and crew assignments correctly, and the crew leader & admin workload collapses to a one-button flow plus approving records — with timekeeping actuals handled by the crew themselves.
